

### **Matchservo Motor & D310 Drive**

#### **Innovated Matchservo Motor**

- a. Minimize EMI and maintenance free. Low noise.
- b. Specialized designation to have smooth shaft rotation and improved reliability.
- c. Light weight and compact size, higher power density, higher torque density and higher efficiency than conventional motors.
- d. Wide speed range of high-efficiency operation, suitable for the load changes, speed variation operating conditions are generally advantages that conventional motors can't achieve.

#### **Intelligent Drive Controller**

- a. The drive provides position, speed and torque for three kinds of basic modes operation.
- b. Digital I / O output into regulation
- c. Dual system control by torque and speed
- d. Internal drive provides 8 segments speed, two-stage acceleration and deceleration control.
- e. Internal drive 7 segment provides position location and a return HOME mode, eliminate the cumulative amount of error, precise, no need of PC (such as HMI, PLC) control, save costs on PC, and therefore more in line with market demand.
- f. Applicable to many commonly used control interfaces such as RS485, standard panel, terminal signal control, PLC And human-peer
- g. Available for all control interfaces, ex. RS 485, direct signal, PLC, HMI.
- h. Drive provides 24VDC for SENSER require.
- i. Speed rendering and real output DC10V for external control header
- j. Drive signals can be output 128 RPM for external control using.
- k. Position tolerance on high speed, avoid over-current, over-voltage and motor blocked protection against abnormal occurs.
